Correct

Mark 5.00 out of 5.00

Consider the following reference and candidate:

Reference: **NLP models improve translation quality***Candidate:* **NLP improves translation quality**

Calculate: Candidate length, Reference length, Unigram precision, Bigram precision, and Brevity penalty.

Hints: p_n is the precision of n-grams, which is calculated as the number of n-grams that appear in both the machine-generated translation and the reference translations divided by the total number of n-grams in the machine-generated translation.**Brevity Penalty** $BP = e^{1 - \frac{r}{c}}$ Reference length **r** = ✓Candidate length **c** = ✓Bigram precision **p2** = ✓Unigram precision **p1** = ✓Brevity penalty **BP** = ✓

Your answer is correct.

The correct answer is:

Reference length **r** = → 5,Candidate length **c** = → 4,Bigram precision **p2** = → 1 / 3,Unigram precision **p1** = → 3 / 4,Brevity penalty **BP** = → e-1/4
