

What is my freelance specialization?

Data Science.

What specific area do I prefer to work in?

I prefer working in applied machine learning and data-driven problem solving.

What technical skills do I excel at in this specialization?

Python (Pandas, NumPy, Matplotlib, Seaborn)

SQL for querying and analyzing databases

Data cleaning and preprocessing

Exploratory Data Analysis (EDA)

Machine Learning models (Random Forest, classification models)

Basic Computer Vision & NLP concepts (YOLO, fake review detection)

What soft skills distinguish me in my work?

Analytical thinking & problem-solving

Attention to detail

Clear communication of complex insights

Logical decision-making

Adaptability and continuous learning

Strong listening skills to understand client needs

What type of problems do I help clients solve?

Understanding hidden patterns and trends in their data

Improving business decisions using data insights

Detecting fake reviews or anomalies

Optimizing pricing, performance, and customer experience

Turning unstructured data into useful information

What type of clients do I target as a freelancer?

Startups and small-to-medium businesses

E-commerce and online platforms

What values do I make sure the client sees in every interaction?

Professionalism

Transparency and honesty

Accuracy and reliability

Respect for deadlines

Commitment to quality

Client-focused problem solving

What type of content will I share to strengthen my personal brand and showcase my expertise?

Data analysis case studies and mini projects

Before & after data cleaning examples

Visual insights and dashboards

Simple explanations of data science concepts

Which digital channel will I start with and why?

LinkedIn, because:

It's the best platform for professional visibility

Clients and recruiters actively search for data professionals

GitHub, because:

allows me to showcase my technical skills through real projects, clean code, and documented workflows, which builds credibility and demonstrates my practical experience as a data scientist.

Your Professional Introductory Statement

I am a data scientist specializing in machine learning and data-driven problem solving. I build predictive models and intelligent solutions that extract meaningful patterns from data and support real-world decision-making. I focus on accuracy, clarity, and creating practical impact through data science.
