Marks	20.00/23.00
Grade	13.04 out of 15.00 (86.96%)

Question 1

Correct

Mark 2.00 out of 2.00

Match:

1. *Continuous Bag-of-Words* model

2.

predicting the word given its context

1. *Continuous Skip-gram* model

predicting the context given a word

Your answer is correct.

The correct answer is:

1. *Continuous Bag-of-Words* model

2.

→ predicting the word given its context ,

1. *Continuous Skip-gram* model

→ predicting the context given a word

Question 2

Correct

Mark 1.00 out of 1.00

Predictive text is often used to detect spam, viruses, and malware before it reaches a user.☐ True☒ False ✓

The correct answer is 'False'.

Question 3

Incorrect

Mark 0.00 out of 1.00

Which one of the following [text representation](#) methods is called **Term-Document (Document-Term) Matrix**?

Select one:

- ☐ A. None of these choices.
- ☒ B. Bag of Words. ✖
- ☐ C. One-Hot Encoding.
- ☐ D. Co-Occurrence Matrix
- ☐ E. All of these choices.
- ☐ F. Occurrence Matrix.

Your answer is incorrect.

The correct answer is:

Occurrence Matrix.

Question 4

Correct

Mark 3.50 out of 3.50

Match:

Sentiment analysis	is the process of analyzing text to determine if the emotional tone of the message is positive, negative, or neutral.
Automatic summarization in NLP	is the process of reducing the text size and create a summary of the text data.
Chatbot	is a computer program that simulates human conversation with an end user.
Paraphrasing	is the process that helps students and professionals rewrite, edit, and change the tone of their text to improve clarity.
Social media monitoring	is the process of identifying and determining what is being said about a brand, individual or product through different social and online channels.
Email filtering	is often used to detect spam, viruses, and malware before it reaches a user.
Predictive text	is an input technology that facilitates typing on a device by suggesting words the user may wish to insert in a text field.

Your answer is correct.

The correct answer is:

Sentiment analysis → is the process of analyzing text to determine if the emotional tone of the message is positive, negative, or neutral. ,

Automatic summarization in NLP → is the process of reducing the text size and create a summary of the text data.,

Chatbot → is a computer program that simulates human conversation with an end user.,

Paraphrasing → is the process that helps students and professionals rewrite, edit, and change the tone of their text to improve clarity.,

Social media monitoring → is the process of identifying and determining what is being said about a brand, individual or product through different social and online channels.,

Email filtering → is often used to detect spam, viruses, and malware before it reaches a user.,

Predictive text → is an input technology that facilitates typing on a device by suggesting words the user may wish to insert in a text field.

Question 5

Correct

Mark 1.00 out of 1.00

Sentiment analysis is the process of reducing the text size and creating a summary of the text data.

- ☐ True
- ☒ False ✓

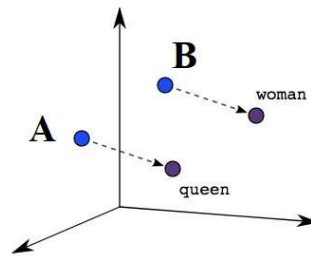

The correct answer is 'False'.

Question 6

Correct

Mark 1.00 out of 1.00

Using the word embedding to complete the missing in the following graph, by finding **A** and **B**:

B ✓

A ✓

Your answer is correct.

The correct answer is:

B → man,

A → king

Question 7

Correct

Mark 1.00 out of 1.00

Is there a match of the following program? (True or False?)

```
import re
```

```
s = "The rain in Germany"
```

```
x = re.search("^The.*Germany$", s)
```

```
print (x)
```

☒ True ✓

☐ False

The correct answer is 'True'.

Question 8

Correct

Mark 1.00 out of 1.00

The **Turing test** measures the performance of an intelligent machine against that of a human being.

☒ True ✓

☐ False

The correct answer is 'True'.

Question 9

Correct

Mark 1.00 out of 1.00

Sentiment analysis is the process of reducing the text size and creating a summary of the text data.

- ☐ True
- ☒ False ✓

The correct answer is 'False'.

Question 10

Correct

Mark 1.00 out of 1.00

Which of the following get information about each word's part of speech (verb, noun, adjective, etc.)?

Select one:

- ☐ A. **Stop word removal**
- ☐ B. **Tokenization**
- ☐ C. **NER**
- ☐ D. **Lemmatization**
- ☒ E. **Tagging** ✓
- ☐ F. None of these choices.
- ☐ G. **Stemming**

Your answer is correct.

The correct answer is:

Tagging

Question 11

Correct

Mark 1.00 out of 1.00

What is the expected output of the following code?

```
>>> model.most_similar(positive=['king', 'woman'], negative=['man'], topn = 1)
```

Select one:

- ☐ A. All of these choices.
- ☐ B. None of these choices.
- ☐ C. 'queens'
- ☐ D. 'prince'
- ☒ E. 'queen' ✓

Your answer is correct.

The correct answer is:

'queen'

Question 12

Incorrect

Mark 0.00 out of 2.00

- Consider the following sentence:

"I can go"

-
- The word embedding are as follows:

I = [0.1, 0.4, 0.4]

can = [0.9, 0.9, 0.2]

go = [0.5, 0.5, 0.6]

Find the sentence embedding by two different methods:

Sum.

Avg.

Avg: $\text{vec}(\text{"I can go"}) =$ ✗

Sum: $\text{vec}(\text{"I can go"}) =$ ✗

Your answer is incorrect.

The correct answer is:

Avg: $\text{vec}(\text{"I can go"}) = \rightarrow (0.5, 0.6, 0.4),$

Sum: $\text{vec}(\text{"I can go"}) = \rightarrow (1.5, 1.8, 1.2)$

Question 13

Correct

Mark 1.00 out of 1.00

Which of the following stages of language processing involve understanding the patterns present in the sound and speeches?

Select one:

- ☐ A. Semantic
- ☒ B. Phonetical and Phonological ✓
- ☐ C. Lexical
- ☐ D. None of these choices.
- ☐ E. All of these choices.
- ☐ F. Morphological
- ☐ G. Syntactic

Your answer is correct.

The correct answer is:

Phonetical and Phonological

Question 14

Correct

Mark 1.00 out of 1.00

Is there a match of the following program? (True or False?)

```
import re
```

```
s = "The rain in Poland"
```

```
x = re.search("rain", s)
```

```
print (x)
```

- ☒ True ✓
- ☐ False

The correct answer is 'True'.

Question 15

Correct

Mark 1.00 out of 1.00

Is there a match of the following program? (True or False?)

```
import re
```

```
s = "The rain in Poland"
```

```
x = re.search("r.*n", s)
```

```
print (x)
```

☒ True ✓☐ False

The correct answer is 'True'.

Question 16

Correct

Mark 3.50 out of 3.50

Match:

Sentiment
analysis

is the process of analyzing text to determine if the emotional tone of the message is positive, negative, or neutral.

✓

Predictive text

is an input technology that facilitates typing on a device by suggesting words the user may wish to insert in a text field.

✓

Email filtering

is often used to detect spam, viruses, and malware before it reaches a user.

✓

Automatic
summarization
in NLP

is the process of reducing the text size and create a summary of the text data.

✓

Chatbot

is a computer program that simulates human conversation with an end user.

✓

Paraphrasing

is the process that helps students and professionals rewrite, edit, and change the tone of their text to improve clarity.

✓

Social media
monitoring

is the process of identifying and determining what is being said about a brand, individual or product through different social and online channels.

✓

Your answer is correct.

The correct answer is:

Sentiment analysis → is the process of analyzing text to determine if the emotional tone of the message is positive, negative, or neutral. ,

Predictive text → is an input technology that facilitates typing on a device by suggesting words the user may wish to insert in a text field.,

Email filtering → is often used to detect spam, viruses, and malware before it reaches a user.,

Automatic summarization in NLP → is the process of reducing the text size and create a summary of the text data.,

Chatbot → is a computer program that simulates human conversation with an end user.,

Paraphrasing → is the process that helps students and professionals rewrite, edit, and change the tone of their text to improve clarity.,

Social media monitoring → is the process of identifying and determining what is being said about a brand, individual or product through different social and online channels.
